COURSE PROJECTS

- **ECE276A: Sensing and Estimation in Robotics** University of California, San Diego
 - * Conducted data synchronization between IMU and stereo camera image features for accurate and efficient measurements
 - * Implemented EKF prediction for real-time positioning and orientation updates using SE(3) kinematics and IMU measurements
 - * Developed EKF update step to correct landmark locations using Jacobian of observation model with visual observations
 - * Simultaneously corrected car pose and landmark locations using observation model Jacobian w.r.t. car pose, feature locations
 - * Analyzed sensitivity to motion and observation model noise and generated an environment map achieving 95% accuracy
